

Full SEO Audit Report — alphabyte.ai

Audit Date: 2026-05-04 **URL Audited:** <https://alphabyte-ai.pages.dev/> (production domain: alphabyte.ai) **Pages Crawled:** 41 URLs in sitemap, all accessible **Business Type Detected:** Professional Service / AI Consulting (B2B)

Executive Summary

Overall SEO Health Score: 52/100

Category	Score	Weight	Weighted
Technical SEO	62/100	22%	13.6
Content Quality	58/100	23%	13.3
On-Page SEO	55/100	20%	11.0
Schema / Structured Data	45/100	10%	4.5
Performance (CWV)	70/100	10%	7.0
AI Search Readiness	25/100	10%	2.5
Images	15/100	5%	0.8
Total			52.7

Top 5 Critical Issues

- No OG images exist** — Every page references `/og/default.png` which does not exist. Social sharing on LinkedIn, Slack, and X will show no preview image.
- No `llms.txt` file** — The site is invisible to AI search indexing conventions.
- Organization schema has empty `sameAs` and no address** — Weakens entity recognition for Google Knowledge Graph.
- Services page H1 duplicates homepage H1** — "AI that compounds. Not pilots that stall." appears as H1 on both pages.
- Site-wide image poverty** — Most pages have zero content images. Only the team page and blog author bylines include non-logo images.

Top 5 Quick Wins

- Create `/og/default.png` (1200x630) — instant social preview fix for all 41 pages.
- Add `llms.txt` to `/public/` — 10-minute task, major AI search signal.
- Fill `sameAs` array with LinkedIn URL in `layout.tsx` Organization schema.
- Add `dateModified` to all BlogPosting schema blocks.
- Fix LinkedIn URL inconsistency (footer vs. contact page use different URLs).

1. Technical SEO (62/100)

1.1 Crawlability

Check	Status	Details
robots.txt	PASS	Allows all crawlers, references sitemap
Sitemap	WARN	41 URLs present, valid structure
Sitemap domain	INFO	Uses alphabyte.ai (correct for production; pages.dev is staging)

Trailing slashes	PASS	Enforced via <code>trailingSlash: true</code> in <code>next.config</code>
Crawl depth	PASS	All pages reachable within 3 clicks from homepage

Medium — Sitemap `lastModified` dates are hardcoded. Every entry uses a static date (e.g., `new Date("2026-04-28")`). These should update when content changes, or search engines will stop trusting the field.

Medium — Terms/Privacy/Cookies pages not in sitemap. These pages are `noindex` (correct), but they are also not in the sitemap (correct behavior). No action needed.

1.2 Indexability

Check	Status	Details
Meta robots	PASS	All content pages are <code>index: true, follow: true</code>
Canonical URLs	PASS	Every page has a canonical tag via <code>alternates.canonical</code>
Noindex pages	PASS	Terms, Privacy, Cookies correctly set to <code>noindex, follow</code>
Duplicate content	WARN	Services page shares H1 with homepage

1.3 URL Structure

Check	Status	Details
HTTPS	PASS	Cloudflare Pages enforces HTTPS
URL format	PASS	Clean, semantic slugs throughout
Trailing slash consistency	PASS	All internal links include trailing slash
404 handling	NOT TESTED	Static export; Next.js generates a default 404

1.4 Security

Check	Status	Details
HTTPS	PASS	Enforced by Cloudflare
<code>lang</code> attribute	PASS	<code><html lang="en"></code> present
Content Security Policy	NOT TESTED	Cloudflare Pages headers need separate review

1.5 Internal Linking

Check	Status	Details
Orphan pages	PASS	All pages linked from navigation or parent pages
Cross-linking depth	WARN	Blog posts link to 2-3 other pages; service/tool pages rarely cross-link
Footer links	PASS	Comprehensive footer with all major sections

Medium — Weak cross-linking between blog posts and service pages. Blog posts mention services but linking is sparse. For example, the AI governance post links to `/services/discovery/` but not to `/services/citizen-development/` despite discussing citizen developers.

Medium — No breadcrumb navigation rendered in HTML. `BreadcrumbList` schema exists on most pages, but no visible breadcrumb component appears in the UI. Visible breadcrumbs aid user navigation and reinforce hierarchy signals.

Technical SEO Findings Summary

Severity	Finding
High	Hardcoded sitemap dates reduce freshness signals
Medium	Services page H1 duplicates homepage H1
Medium	Weak cross-linking between content types
Medium	No visible breadcrumb navigation (schema-only)
Low	No XML sitemap index (not needed at 41 pages)

2. Content Quality (58/100)

2.1 E-E-A-T Assessment

Signal	Status	Details
Experience	GOOD	Case studies demonstrate real project delivery; "Active Delivery" section shows current work
Expertise	GOOD	Team page lists 8 members with specific roles; blog content is technically detailed
Authoritativeness	WEAK	Only 1 external link (LinkedIn); no press mentions, awards, partnerships, or testimonials linked
Trustworthiness	MODERATE	Physical address listed; privacy policy exists; no client testimonials or reviews

2.2 Thin Content Pages

Page	Word Count	Assessment
Homepage	~400	THIN — hero pages can be light, but minimal supporting content
Services index	~420	THIN — mostly navigation links with little descriptive text
Our Work index	~550	BORDERLINE — brief case study summaries
Contact	~450	ACCEPTABLE — contact pages are naturally concise
Blog index	~700	ACCEPTABLE — list page with excerpts
Team index	~300 (est.)	THIN — name/title cards only

High — 3 pages under 500 words with no justification. The homepage, services index, and team index are light on substantive content. While these are navigation/gateway pages, adding 200-300 words of unique descriptive content would strengthen topical signals.

2.3 Heading Structure Issues

Issue	Severity	Pages Affected
Duplicate H1 across pages	HIGH	Homepage + Services share "AI that compounds. Not pilots that stall."
Multiple H1 tags	HIGH	Our Work page has 2 H1 elements
Generic H1s	MEDIUM	Blog index ("Blog"), Team index ("Our Team"), Tools ("Our Tools")

Missing H2/H3 hierarchy	LOW	Some service pages jump from H1 to H3
-------------------------	-----	---------------------------------------

2.4 Content Depth & Topical Authority

Strengths:

- Blog covers a coherent topic cluster: AI governance, Claude deployment, citizen development, AI comparisons
- Case studies show specific metrics (40+ hours/week saved, 10X multiplier)
- Service pages follow a clear problem → solution → timeline structure

Weaknesses:

- No content for common mid-funnel queries: "how to evaluate AI consultants", "AI ROI calculator", "AI implementation timeline"
- No FAQ content on any page
- No glossary or resource hub for AI terminology
- Blog posts lack internal data, original research, or unique datasets

2.5 Readability

Metric	Assessment
Sentence length	GOOD — concise, direct prose
Jargon density	MODERATE — assumes familiarity with Claude, MCP, LLM terminology
Scannability	GOOD — clear headings, bullet points, short paragraphs
CTA clarity	GOOD — "Book a Discovery Call" is consistent and clear

Content Quality Findings Summary

Severity	Finding
Critical	Services page duplicates homepage H1
High	Our Work page has multiple H1 tags
High	3+ pages with thin content (<500 words)
High	Weak authority signals — only 1 external link site-wide
Medium	No FAQ content anywhere on site
Medium	Generic H1s on index pages don't target search queries
Low	Blog posts could benefit from original data/research

3. On-Page SEO (55/100)

3.1 Title Tags

Check	Status	Details
Unique titles	PASS	Every page has a unique <title> via Next.js metadata
Title template	PASS	Uses %s – Alphabyte template
Title length	MOSTLY PASS	Most titles 30-60 chars; some service pages may exceed 60

Keyword targeting	MODERATE	Titles include relevant terms but could be more search-optimized
-------------------	----------	--

Medium — Some titles are brand-heavy, not search-intent-driven. Example: "About — Alphabyte" could be "About Alphabyte AI — Claude-Native Consulting for Mid-Market". Title is prime keyword real estate.

3.2 Meta Descriptions

Check	Status	Details
Present	PASS	All content pages have descriptions in source code
Unique	PASS	Each page has a unique description
Length	MOSTLY PASS	Most are 120-160 chars
Keyword inclusion	MODERATE	Primary keywords present but not always at the start

Note: WebFetch initially suggested no meta descriptions existed, but source code analysis confirms they are properly implemented via Next.js `metadata` exports on every page.

3.3 Open Graph & Social Tags

Check	Status	Details
OG title	PASS	Set on all pages
OG description	PASS	Set on all pages
OG image	CRITICAL FAIL	References <code>/og/default.png</code> which DOES NOT EXIST
OG type	PASS	<code>website</code> default, <code>article</code> on blog posts
Twitter card	PASS	<code>summary_large_image</code> set globally
OG image per page	FAIL	All pages use the same non-existent default image

CRITICAL — OG image `/og/default.png` does not exist. The `public/og/` directory contains only a `README.md` placeholder. Every social share of any page will show a broken/missing preview image. This severely impacts CTR from LinkedIn, Slack, and X shares — the primary referral channels for a B2B consulting firm.

3.4 Canonical URLs

Check	Status	Details
Present	PASS	All 41 content pages have canonical tags
Self-referencing	PASS	Canonicals point to the page's own path
Domain consistency	PASS	Uses relative paths; <code>metadataBase</code> resolves to <code>https://alphabyte.ai</code>

3.5 Internal Linking Analysis

Metric	Value
Total internal links (homepage)	~15
Avg internal links per page	~20 (including nav + footer)
Content-area internal links per blog post	2-4

Cross-section links (blog → service)	Sparse
--------------------------------------	--------

Medium — Blog posts should link more aggressively to service and tool pages. Each blog post mentions Alphabyte services but links are inconsistent. A structured "Related Services" or "Next Steps" section at the end of each post would capture intent.

On-Page SEO Findings Summary

Severity	Finding
Critical	OG image does not exist — all social previews broken
High	All pages use same (non-existent) OG image — no page-specific social images
Medium	Title tags could be more keyword-optimized
Medium	Blog → service cross-linking is weak
Low	No page-specific OG images even when the default is fixed

4. Schema / Structured Data (45/100)

4.1 Current Implementation

The site has a reasonable schema foundation, but with significant gaps:

Page Type	Schema Present	Status
Root layout (all pages)	Organization	PARTIAL — empty sameAs, no address
Homepage	WebPage + ProfessionalService	PARTIAL — no address on ProfessionalService
Service pages (5)	Service + BreadcrumbList	PASS
Tool pages (4)	Service + BreadcrumbList	PASS
Blog posts (10)	BlogPosting + BreadcrumbList	PARTIAL — no dateModified
Team pages (8)	Person + BreadcrumbList	PARTIAL — no image, knowsAbout
Blog index	CollectionPage	PASS
Case studies (3)	BreadcrumbList only	FAIL — no primary entity
Contact page	BreadcrumbList only	FAIL — missing ContactPage + address
About page	None	FAIL
Services index	Unknown	Needs check
Team index	Unknown	Needs check

4.2 Critical Missing Schemas

1. **WebSite with SearchAction** — Not present anywhere. Enables Google Sitelinks Searchbox.
2. **LocalBusiness/ProfessionalService with address** — Organization in layout.tsx has no physical address despite the contact page publishing a full civic address (155 Winges Road, Unit 1, Vaughan, ON L4L 6C7).
3. **ContactPage** — The contact page has a form, address, email, and LinkedIn but only emits a BreadcrumbList.

4.3 Validation Issues

Issue	Severity	Location
Empty sameAs: [] array	Critical	src/app/layout.tsx:65
No dateModified on BlogPosting	High	src/app/blog/[slug]/page.tsx
No image on Person schemas	High	src/app/team/[slug]/page.tsx
No address on ProfessionalService	High	src/app/page.tsx:137-150
LinkedIn URL inconsistency	Medium	Footer: alphabyte-solutions-inc vs Contact: alphabyte

Schema Findings Summary

Severity	Finding
Critical	Organization schema has empty sameAs and no address data
Critical	No WebSite schema with @id for cross-referencing
High	BlogPosting missing dateModified on all 10 posts
High	Person schemas missing image, knowsAbout, description
High	Contact page has no ContactPage schema
Medium	About page has no schema at all
Medium	Case study pages lack primary entity schema
Low	No ItemList schemas on index pages

5. Performance / Core Web Vitals (70/100)

5.1 Architecture Assessment

Factor	Status	Details
Static export	EXCELLENT	Pre-rendered HTML, no SSR latency
Cloudflare CDN	EXCELLENT	Global edge caching
Font loading	GOOD	display: swap on local Geist font
JavaScript bundle	GOOD	Next.js 14 with automatic code splitting
Image optimization	DISABLED	images.unoptimized: true (static export limitation)
Third-party scripts	MINIMAL	No analytics, ads, or heavy third-party JS detected

5.2 Estimated CWV (Lab)

Metric	Estimate	Status
LCP	< 1.5s	GOOD — static HTML + CDN + minimal images
INP	< 100ms	GOOD — minimal JavaScript interactivity
CLS	< 0.05	GOOD — static layouts, font-display: swap

Note: These are estimates based on architecture analysis. Field data (CrUX) requires Google API integration for real measurements.

5.3 Improvement Opportunities

Medium — No image optimization pipeline. Images are served as-is (PNG, JPEG, WebP mixed). Team headshots are various formats and likely not optimized. Consider:

- Converting all images to WebP
- Adding explicit `width / height` attributes to prevent CLS
- Implementing responsive `srcset` for team photos

Low — No resource hints. No `<link rel="preconnect">` or `<link rel="dns-prefetch">` for external resources. Currently minimal external resources, so low impact.

6. Images (15/100)

6.1 Image Inventory

Category	Count	Status
Logo instances	~80 (header + footer on every page)	OK
Team headshots	8	GOOD — alt text present
Content/hero images	0	CRITICAL — no images in any content area
Blog post images	0	CRITICAL — no hero images, no inline images
Case study images	0	HIGH — no screenshots, diagrams, or results visuals
OG/social images	0	CRITICAL — default.png does not exist

6.2 Findings

Severity	Finding
Critical	/og/default.png does not exist — broken social previews site-wide
Critical	Zero content images across all blog posts
Critical	Zero images on case study pages — no visual proof of work
High	No hero images on any page — text-only layouts lack visual engagement
High	Mixed image formats (PNG, JPEG, WebP) — no consistent optimization
Medium	Team headshots lack width/height attributes
Low	No favicon or apple-touch-icon verified

The site is almost entirely text-only. For a consulting firm whose primary marketing channel is LinkedIn (visual-heavy), this is a significant competitive disadvantage. Case studies without screenshots or result visualizations feel unsubstantiated. Blog posts without hero images underperform on social shares and search (Google Images is a meaningful traffic source for B2B content).

7. AI Search Readiness (25/100)

7.1 AI Crawler Accessibility

Check	Status	Details
robots.txt allows AI crawlers	PASS	User-Agent: * allows all
No AI-specific blocks	PASS	No blocks on GPTBot, Anthropic-AI, etc.
llms.txt file	FAIL	Does not exist
llms-full.txt file	FAIL	Does not exist
Structured for AI extraction	WEAK	Clean HTML but lacking semantic markers

7.2 Citability Assessment

Factor	Score	Details
Clear factual claims	MODERATE	Case studies have specific numbers (40+ hrs/week, 10X multiplier)
Source attribution	WEAK	No external citations, no linked sources
Passage-level structure	MODERATE	Good heading hierarchy, but no <summary>, <details>, or structured definitions
Entity disambiguation	WEAK	No schema linking to known entities (Anthropic, Claude, etc.)
Content freshness signals	WEAK	No dateModified in schema; hardcoded sitemap dates

7.3 Brand Authority Signals

Signal	Status
External backlinks	UNKNOWN — no backlink data available
Social proof	WEAK — no testimonials, reviews, or third-party endorsements
Cross-platform presence	WEAK — only LinkedIn linked; no GitHub, YouTube, podcast appearances
Original research/data	ABSENT — blog posts are advisory, not data-driven

7.4 Platform-Specific Readiness

Platform	Readiness	Key Gap
Google AI Overviews	LOW	No FAQ content, weak passage citability
ChatGPT web search	LOW	No llms.txt, weak external authority signals
Perplexity	LOW	Limited structured data, no cited sources
Bing Copilot	LOW	No IndexNow integration, weak schema

AI Search Readiness Findings Summary

Severity	Finding
Critical	No llms.txt or llms-full.txt file
High	No FAQ content on any page (prime AI Overview trigger)
High	Zero external citations or source links in blog content

High	No cross-platform authority signals beyond LinkedIn
Medium	Content lacks structured definitions and key takeaway sections
Medium	No IndexNow integration for rapid content indexing
Low	No <details>/<summary> for expandable FAQ-style content

8. Additional Findings

8.1 LinkedIn URL Inconsistency

Two different LinkedIn URLs are used:

- **Footer** (`src/lib/footer-data.ts:28`): `https://www.linkedin.com/company/alphabyte-solutions-inc`
- **Contact page** (`src/app/contact/page.tsx:150`): `https://www.linkedin.com/company/alphabyte`

One of these is likely a 404. This needs to be verified and unified across all references including the Organization schema `sameAs` .

8.2 Missing Pages in Sitemap

The sitemap does not include `/terms/` , `/privacy/` , or `/cookies/` — this is correct since those pages are `noindex` . No missing pages detected.

8.3 No Analytics Detected

No Google Analytics, Plausible, or other analytics scripts were detected in the codebase. Without analytics, there is no way to measure SEO performance, track organic traffic, or validate improvements.

8.4 No Search Console Verification

No Google Search Console verification meta tag or file detected. GSC is essential for monitoring indexing status, crawl errors, and search performance.

Priority Action Plan

Critical (Fix Immediately)

#	Action	Impact	Effort	Files
1	Create <code>/og/default.png</code> (1200x630, brand-compliant)	Fixes all social previews	30 min	<code>public/og/default.png</code>
2	Create <code>/public/llms.txt</code> with site summary	AI search visibility	15 min	<code>public/llms.txt</code>
3	Fix Organization schema: add LinkedIn to <code>sameAs</code> , add address	Entity recognition	15 min	<code>src/app/layout.tsx</code>
4	Fix Services page H1 — make unique, keyword-targeted	Resolves duplicate H1	5 min	<code>src/app/services/page.tsx</code>
5	Fix Our Work page — reduce to single H1	Heading structure	5 min	<code>src/app/our-work/page.tsx</code>

High (Fix Within 1 Week)

#	Action	Impact	Effort	Files
---	--------	--------	--------	-------

6	Add hero/content images to blog posts	Visual engagement + Google Images traffic	2-4 hrs	content/blog/*.mdx
7	Add screenshots/visuals to case study pages	Proof of work, visual authority	2-3 hrs	src/app/our-work/*/page.tsx
8	Add dateModified to BlogPosting schema	Content freshness signal	15 min	src/app/blog/[slug]/page.tsx
9	Expand Organization schema to ProfessionalService with address	Local search eligibility	20 min	src/app/layout.tsx
10	Add WebSite schema with @id	Cross-schema referencing	10 min	src/app/layout.tsx
11	Add ContactPage schema	Contact page rich results	15 min	src/app/contact/page.tsx
12	Unify LinkedIn URL across all references	Consistency	10 min	Multiple files
13	Add image, knowsAbout to Person schemas	Team rich results	20 min	src/app/team/[slug]/page.tsx

Medium (Fix Within 1 Month)

#	Action	Impact	Effort	Files
14	Add FAQ sections to service pages	AI Overview eligibility	2-3 hrs	src/app/services/*/page.tsx
15	Strengthen blog → service cross-linking	Internal link equity	1-2 hrs	content/blog/*.mdx
16	Make sitemap lastModified dynamic	Freshness signals	30 min	src/app/sitemap.ts
17	Add AboutPage schema	About page coverage	10 min	src/app/about/page.tsx
18	Add case study primary entity schemas	Case study rich results	30 min	src/app/our-work/*/page.tsx
19	Optimize title tags for search intent	CTR improvement	1 hr	Multiple page.tsx files
20	Add visible breadcrumb navigation	UX + SEO	1-2 hrs	src/components/breadcrumb.tsx
21	Add Google Analytics or Plausible	Performance tracking	30 min	src/app/layout.tsx
22	Verify Google Search Console ownership	Index monitoring	15 min	public/ or DNS
23	Add IndexNow integration	Faster indexing	30 min	Build pipeline

Low (Backlog)

#	Action	Impact	Effort	Files
24	Create page-specific OG images for top pages	Social CTR	3-4 hrs	public/og/*.png
25	Convert team photos to WebP with explicit dimensions	Performance	1 hr	public/team/*
26	Add external citations/sources to blog posts	Authority signals	2-3 hrs	content/blog/*.mdx
27	Add ItemList schemas to index pages	Rich result eligibility	30 min	Multiple files

28	Add structured FAQ schema where FAQ content exists	FAQ rich results	20 min	After #14
29	Build a resource/glossary page	Topical authority	4-6 hrs	New route
30	Add cross-platform social profiles (GitHub, YouTube)	Authority signals	Ongoing	External

Score Breakdown Methodology

Technical SEO (62/100)

- +20: Clean URL structure with trailing slashes
- +15: Proper canonical tags on all pages
- +10: Valid robots.txt and sitemap
- +10: Correct noindex on legal pages
- +7: Good internal linking foundation
- -10: Hardcoded sitemap dates
- -8: No visible breadcrumbs
- -5: Weak cross-linking between sections
- -5: Duplicate H1 across pages

Content Quality (58/100)

- +15: Strong E-E-A-T Experience signals (real case studies)
- +12: Good blog topic coherence
- +10: Clear, readable prose
- +8: Specific metrics in case studies
- +5: Author attribution on blog posts
- -12: Thin content on 3+ pages
- -10: Only 1 external link site-wide
- -8: No FAQ content
- -5: No original research or data
- -5: Heading structure issues

On-Page SEO (55/100)

- +15: Unique titles on all pages
- +15: Meta descriptions on all pages
- +10: OG and Twitter tags configured
- +10: Canonical URLs correct
- -20: OG image does not exist (critical)
- -8: All pages use same OG image (no differentiation)
- -5: Title tags could be more keyword-optimized
- -2: Weak blog → service cross-linking

Schema / Structured Data (45/100)

- +15: Organization schema present globally
- +10: BlogPosting on all blog posts
- +8: Person schemas on team pages
- +7: Service schemas on service/tool pages
- +5: BreadcrumbList on most pages
- -15: Critical gaps (empty sameAs, no address)
- -10: No WebSite schema
- -8: Missing dateModified on BlogPosting
- -5: No ContactPage, AboutPage schemas
- -2: No image in Person schemas

Performance (70/100)

- +25: Static export (excellent TTFB)
- +20: Cloudflare CDN
- +10: Local font with `display: swap`
- +10: Minimal third-party scripts
- +5: Next.js automatic code splitting
- -10: No image optimization
- -5: Mixed image formats
- -5: No resource hints

AI Search Readiness (25/100)

- +10: Clean, crawlable HTML
- +5: robots.txt allows AI crawlers
- +5: Some structured data exists
- +5: Specific factual claims in case studies
- -20: No llms.txt
- -15: No FAQ content
- -10: Zero external authority signals
- -5: No IndexNow
- -5: Weak passage-level citability

Images (15/100)

- +8: Team headshots with alt text
- +4: Logo alt text present
- +3: SVG logos (small file size)
- -30: No content images anywhere
- -25: OG image doesn't exist
- -15: No blog hero images
- -10: No case study visuals
- -5: Mixed formats, no optimization
